DevOps & Platform Engineer · Enterprise AI Automation

SUMMARY

DevOps and Platform Engineer at TCS who delivered Deutsche Börse AG's C7-Security Clearing Services (C7-SCS) platform from May 2025 to July 2026 and drove the team's adoption of enterprise AI automation on Aether, Deutsche Börse's AI orchestration platform — earning TCS's A-Band rating (highest tier) and a Certificate of Appreciation from Deutsche Börse.

Built the team's AI tooling end to end: a custom Jira MCP server (FastMCP), operationalized OpenShift and Jenkins MCP integrations, and AI Agents, AI Skills, and persistent AI Memory automating DCCR and SIR workflows, associate onboarding, and AI-assisted code delivery from Jira ticket to review-ready commit. Now focused on AI-native development, backed by deep OpenShift, Kubernetes, and CI/CD foundations.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS)

India · Jan 2025 – Present

DevOps Engineer — Deutsche Börse AG, C7-Security Clearing Services (C7-SCS)

Pune · May 2025 – Jul 2026

— AI Automation

- Engineered enterprise AI automation on Aether, Deutsche Börse's AI orchestration platform — 4 specialized AI Agents, 5 AI Skills, persistent AI Memory, and 3 MCP (Model Context Protocol) integrations automating the team's engineering workflows.
- Developed a custom Jira MCP server in Python using FastMCP with Streamable HTTP transport, and integrated it into Aether — enabling AI models to operate directly on Jira for engineering workflows.
- Integrated, configured, validated, and operationalized open-source MCP servers for OpenShift and Jenkins within the platform — enabling AI-driven cluster operations such as CronJob creation and OpenShift resource management, alongside CI/CD automation.
- Built AI Skills that automate core engineering workflows: DCCR creation, SIR creation, and SIR analysis in standardized formats.
- Automated associate onboarding and offboarding with AI Skills that execute the required engineering changes ahead of infrastructure provisioning.
- Configured persistent AI Memory — namespace scaling conventions, environment-specific deployment behavior, registry and image-stream selection — so automation applies project knowledge without repeated manual instruction.
- Designed specialized AI Agents — Coding, Code Review, Jenkins Operations Engineer, and a Morning Briefing agent that collects in-flight engineering work, summarizes upcoming tasks, and emails daily briefings.
- Engineered an AI-assisted development workflow: reads Jira tickets and pull-request feedback, implements changes, creates feature branches, tests locally, and pushes review-ready commits — engineers keep approval control.

— Core DevOps

- Provisioned immutable, secure infrastructure with Terraform and automated multi-environment configuration with Ansible, ensuring consistency across the SDLC.
- Built and maintained high-availability CI/CD pipelines in Jenkins and GitHub Actions, enabling reliable build, test, and release automation and safe promotion of critical hotfixes.
- Deployed and operated containerized trade-processing applications on OpenShift (Kubernetes) using Docker, Podman, and Helm, improving deployment repeatability across environments.
- Developed a Python utility to decrypt CIL trade messages and validate data integrity against PostgreSQL records, achieving 100% accuracy in transaction verification within a regulated financial system.
- Implemented monitoring and observability with Prometheus, Grafana, and the ELK Stack, accelerating incident detection and root cause analysis for pipelines and trade processing.
- Built internal automation tooling — **SpaceWarden** for storage-quota enforcement and resource optimization, and **Roll-on** for scripted permission provisioning and pull-request creation during onboarding — reducing manual overhead and enforcing compliance.

— Recognition

- Awarded an **A-Band** performance rating (TCS's highest tier) and a **Certificate of Appreciation** from Deutsche Börse AG for DevOps expertise, ownership, and reliable infrastructure delivery.
- Back End Developer — NSDL Account* Thane · Mar 2025 – May 2025
- Supported onboarding and knowledge-transfer activities for the NSDL account while strengthening Core Java, object-oriented programming (OOP), SQL, and enterprise application development fundamentals.
- ILP Trainee — TCS Digital (Initial Learning Program)* Thane · Jan 2025 – Mar 2025
- Completed TCS Digital's Initial Learning Program with hands-on training in Core Java, JDBC, Servlets, JSP, SQL, Git, and enterprise application development.

TECHNICAL SKILLS

AI & Automation	Aether (enterprise AI orchestration), AI Agents, AI Skills, AI Memory, MCP (Model Context Protocol), FastMCP, AI workflow automation
Programming	Python, Bash/Shell, Go (Golang), SQL, Java
Platform & Containers	Red Hat OpenShift, Kubernetes, Docker, Podman, Helm
Infrastructure as Code	Terraform, Ansible
CI/CD & Version Control	Jenkins, GitHub Actions, GitLab CI, Git, GitHub
Cloud & Operating Systems	Google Cloud Platform (GCP), Linux (RHEL/Fedora)
Monitoring & Observability	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)
Data & Integration	PostgreSQL, REST APIs, Flask, Jira
Practices	Incident Management, Root Cause Analysis, Release Engineering, DevSecOps, Agile

PROJECTS

- **PDF Digital Signer API** — Designed and deployed a Python/Flask REST API that merges and digitally signs PDF documents, streamlining administrative document workflows.
- **Bharat Leaf Lens (AI/ML)** — Built a cross-platform mobile application running TensorFlow Lite and PyTorch models for real-time, on-device image recognition on edge devices.
- **IoT Infrastructure Control** — Developed an ESP32-based remote control system with a centralized web dashboard managing state across multiple nodes.

PUBLICATIONS

- **Bharat Leaf Lens: Medicinal Plant Recognition** — International Journal of Research Publication and Reviews (IJRPR), Vol. 5, Issue 5, 2024. Convolutional Neural Networks (CNN) for image classification.

EDUCATION

PES's Modern College of Engineering, Pune	Pune, India
<i>Bachelor of Engineering in Computer Engineering — CGPA: 8.47</i>	2024
